Adam Joseph Laloge

Design Engineer | Human-Centered AI Systems

West Harrison, Indiana | hello@adamlaloge.com
adamlaloge.com | github.com/AStellarScene

Summary

Design engineer and UI/UX software engineer building human-centered AI systems in regulated medical-device environments. Researches users, designs the interface, and writes the code behind it: HMI interfaces, backend services, AI agent workspaces, and embedded test hardware. Moderates usability sessions with end users, translates findings into formal, traceable system specifications, and validates the full stack against them.

Skills

UX Research and HMI Design

Moderated usability testing with end users; user research, requirements, personas, and journey maps; HMI design for complex technical systems; wireframes, user flows, and prototypes in Figma, Illustrator, Affinity, and Miro; functional coded prototypes; graphic design and visual composition; heuristic evaluation and calibration procedure UX; accessible design, ADA and Section 508 compliance

AI Systems Design

AI agent workspace design; agent team orchestration; agentic coding with Muse, Copilot, and Claude; retrieval-augmented generation (RAG) and MCP tool integration, including CAD driven through MCP; AI output evaluation and validation; natural language workflow automation

Software Development

Python, C#/.NET, C++, JavaScript, Node.js, and Rust; HTML/CSS and responsive web development; WordPress (degree coursework); SQL and database design; embedded microcontrollers and sensor integration; Git/GitHub, Docker, Linux, and WebSockets; parametric CAD modeling

Validation and Regulated Systems

Requirements traceability; systems analysis and technical documentation; medical device verification and validation; failure investigation and regression testing; automated test equipment and calibration methods; test data analysis and validation documentation

Experience

Baxter International, Inc. | 2025 – Present | Batesville, IN
Engineering Test Technician (Full-Time Work While Completing B.S. Degree)

- **Usability research:** Moderate usability test sessions with end users of lab test software. Gather requirements and needs directly from users. Translate findings into formal traceable system specifications for internal tools developed full stack.
- **Interface design:** Design user interfaces and human machine interfaces (HMI) for automated test equipment and test software used daily by lab technicians.
- **AI systems development:** Deliver end to end software development from user interface design through backend implementation. Build specialized AI agent workspaces that support automated testing and software development. Includes natural language protocol ingestion and automated traceability reporting.

- **Automated test equipment:** Design and build automated test equipment for medical device testing. Design, build, and validate test equipment with embedded controllers.
- **Medical device verification:** Perform verification testing of medical devices to rigorous compliance standards. Maintain requirements traceability throughout.
- **Innovation and communication:** Present lab results and AI work at project reviews and internal showcases. Contribute to multiple invention disclosures.

Computer Solutions and Innovations, LLC. | 2023 – 2024 | Versailles, IN
On-Site IT Support (Part-Time Work While Completing A.A.S. Degree)

- **Technical Support:** Delivered in-person and remote support for hardware and software issues.
- **IT Operations:** Assisted with infrastructure planning and hardware asset management.
- **Procurement and Upgrades:** Handled purchasing, planned system upgrades, and configured equipment.

Projects

BenchLab | Testing simulator | In planning
Created from scratch, modeled on an automated test platform I built professionally: an internal codebase of 20,000+ lines of Python that cannot be shared publicly. Visual test builder, in-browser simulated device, auto-generated traceability reporting, and an agent layer that converts plain-English protocols into executable test steps.

Lucent Launcher | Native Minecraft launcher in Rust | In development
Native launcher built with Rust, GTK4, and Libadwaita. Launcher core builds clean with 38 passing tests; features resource-pack management, Flatpak packaging, and a readiness-aware launch flow.
github.com/AStellarScene/lucent-launcher

Education

WGU School of Business (Online) | B.S. User Experience Design | August 2024 – Expected January 2027

Ivy Tech Community College (Columbus, IN) | A.A.S. Software Development | Graduated May 2024
Additional completed coursework: marketing, customer contact, art theory and design principles, database design

---

Certifications

CompTIA Project+ | CompTIA | Certified 2024
Planning, executing, and delivering projects on time and within scope.

Google UX Design Certificate | Google | In Progress (Expected 2027)
UX research, wireframing, and prototyping fundamentals, completed through the WGU B.S. UX Design program.
