Adam Joseph Laloge

UI/UX Software Engineer | Human-Centered AI Systems

West Harrison, Indiana | hello@adamlaloge.com

Profile

UI/UX Software Engineer and full-stack developer specializing in human-centered AI systems, requirements engineering, and automated test architecture in regulated medical-device environments. Moderates usability sessions with end users to capture operator workflows and translate real-world human factors into formal, traceable system specifications. Designs, builds, and validates the full stack behind those systems, from HMI/UI prototypes and functional interfaces to backend services, AI agent workspaces, and the embedded control hardware behind the software.

Experience

Baxter International, Inc. | 2025 – Present | Batesville, IN

Engineering Test Technician (Full-Time Work While Completing B.S. Degree)

- **Usability research:** Moderate usability test sessions with end users of lab test software. Gather requirements and needs directly from users. Translate findings into formal traceable system specifications for internal tools developed full stack.
- **Interface design:** Design user interfaces and human machine interfaces (HMI) for automated test equipment and test software used daily by lab technicians.
- **Automated test equipment:** Design and build automated test equipment for medical device testing. Design, build, and validate test equipment with embedded controllers.
- **AI systems development:** Deliver end to end software development from user interface design through backend implementation. Build specialized AI agent workspaces that support automated testing and software development. Includes natural language protocol ingestion and automated traceability reporting.
- **Medical device verification:** Perform verification testing of medical devices to rigorous compliance standards. Maintain requirements traceability throughout.
- **PLM and issue management:** Manage document control and validation data in enterprise PLM systems. Document product issues and escalate them to Engineering.
- **Electrical and mechanical assembly:** Perform electrical and mechanical assembly of projects from engineering documentation.
- **Innovation and communication:** Present lab results and AI work at project reviews and internal showcases. Contribute to multiple invention disclosures.

Computer Solutions and Innovations, LLC. | 2023 – 2024 | Versailles, IN

On-Site IT Support (Part-Time Work While Completing A.A.S. Degree)

- **Technical Support:** Delivered in-person and remote support for hardware and software issues.
- **IT Operations:** Assisted with infrastructure planning and hardware asset management.
- **Procurement and Upgrades:** Handled purchasing, planned system upgrades, and configured equipment.

Education

WGU School of Business (Online) | **B.S. User Experience Design**

August 2024 – In Progress (2027 Completion)

Ivy Tech Community College (Columbus, IN) | **A.A.S. Software Development**

Graduated May 2024

Certifications

CompTIA Project+ - Certified 2024

Provides a foundational understanding of planning, executing, and delivering projects on time and within scope.

Google UX Design Certificate - In Progress (2027 Completion)

Completing through the WGU B.S. UX Design program. Covers UX research, wire-framing, and prototyping fundamentals.

Skills

AI Systems

AI agent workspace design

RAG and MCP tool integration

AI output evaluation and validation

Natural language workflow automation

UX Research and HMI Design

Moderate usability testing with end users

User needs, requirements, personas, and journey maps

HMI design for complex technical systems

Wireframes, user flows, and prototypes in Figma, Illustrator, Affinity, and Miro

Heuristic evaluation and calibration procedure UX

Software Development

Python, C#/.NET, C++, JavaScript, HTML/CSS, and Rust

SQL, embedded microcontrollers, sensor integration

Git/GitHub, Docker, Linux, and WebSockets

Validation and Regulated Systems

Requirements traceability

Medical device verification and validation

Failure investigation and regression testing

Automated test equipment and calibration methods

Test data analysis and validation documentation
